

TIP to 'Unpack' and store your Speech bone (Spreekbeentje®):

1.

Open the pouch, keep it upside down en drop its content on a (clean) surface.

2.

'Search' for the speech bone, pick it up between your thumb and index finger and lift it high. The silk ribbon (that has already got two knots, one just above the speech bone and one at the end) will not entangle in this way.

3.

Storing:

take your speech bone between thumb and index finger and wind the ribbon around these two fingers - grasp the coiled ribbon together with your speech bone firmly between the same thumb and index finger.

4.

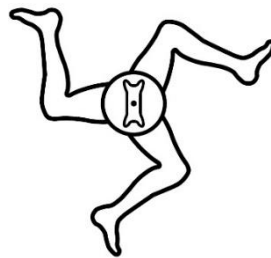

Now insert your speech bone + ribbon together in the pouch.

Grasp the pouch with the thumb and index finger of your other hand on the spot where your speech bone is located.

Let go of speech bone in the pouch while getting your fingers out of the pouch (keep holding it with your other hand!).

5.

Push any protruding ribbon gently into the pouch and pull the drawstring - or fold it and put the pouch in your wallet, handbag, pocket etc...

Did your ribbon still run up entangled?

Don't pull the ribbon, but try to loosen the knot, for example with the blunt end (the eye) of a needle. Slowly and carefully entangle the knot.

In case of hopeless knots or breaking:

Order a replacing ribbon at Artofmini.com. You will find a large supply of 2mm silk ribbon, offered per meter and in various colours.

Thread your new ribbon with a needle (maximum diameter of the eye is 2 mm) through your speech bone. Tie a knot, just about 3 cm above the speech bone and, finally, knot the ends together.
